EDUCATION:

B.Tech. Computer Science and Engineering 7.58
Amity University Noida, Uttar Pradesh (2022-2026)

EXPERIENCE:

Software Engineering Intern (Java, System Optimization) **Continental Automotive [May 2025 – July 2025]**

- Developed and optimized a Java-based internal engineering tool, refactoring backend logic and eliminating redundant processing paths to improve execution efficiency by ~70%.
- Built and integrated automated test models to validate system behavior, ports, and data flow, working within a Git-based version-control workflow with regular commits and code reviews.
- Performed profiling, debugging, and root-cause analysis across the validation pipeline, using logging and iterative testing to reduce execution overhead and improve reliability.

Model-Based Development & Test Automation Intern (Python, Automation) **Schaeffler [Jan 2026 – April 2026]**

- Built a workflow dashboard that ingested project data from the JIRA REST API and automatically segregated tasks by completion status and by project, giving teams a single live view of progress across parallel projects.
- Automated the data layer to pull and normalize JIRA metadata on a schedule, replacing manual status-tracking with a repeatable reporting flow that other engineers could extend.
- Developed a Python utility to automate cleanup of large calibration files, reducing manual processing time and improving maintainability.

Software Engineering Intern (ThinkSchool Program) **ThinkBridge [Aug 2026 – Oct 2026]**

- Built and deployed an Angular and ASP.NET Core quotes application on Azure; used a managed-identity Function to reach a protected API without a client secret, with 107 frontend and 20 API tests passing.
- Optimized EF Core query and caching paths: removed an N+1 query to cut local p99 latency from 215.8 to 2.55 ms, and verified one HybridCache factory run across 40 concurrent cold requests.

PROJECTS:

MarketPilot AI – Autonomous Marketing Agent Platform (Node.js, TypeScript, Next.js, React, Tailwind, Google Gemini, Express, Octokit)

- Built a Gemini-powered agent that loads workspace memory, plans marketing tasks, and runs tools through automatic, notify, or human-approval gates with per-tool rollback and an append-only event log.
- Implemented an SEO pipeline that audits live pages and connected GitHub repositories for metadata, alt-text, and copy gaps; drafts fixes and opens one rollback-safe pull request through Octokit.
- Built a Next.js dashboard for workstreams, approvals, audits, drafts, and chat using 9 typed stores; scheduled weekly audits with node-cron.

Invoice Submission & Approval Platform (C#, .NET 10, EF Core, Azure)

- Built a modular-monolith invoice workflow covering submission, matching, disputes, approvals, and SLA-based deemed approval, with immutable due dates and concurrency-safe purchase-order capacity.
- Implemented EF Core and SQL Server persistence with a transactional outbox to Azure Service Bus; provisioned dev and production infrastructure using Bicep, App Service, private Azure SQL, managed identity, Key Vault, and OpenTelemetry.
- Created CI with 55 domain, architecture, integration, and API tests; indexed the invoice list path on a local 50,000-row SQL Server dataset, reducing p99 latency from 508 ms to 19.3 ms under identical load.

Driver Drowsiness Detection System (Python, TensorFlow, OpenCV)

- Built an end-to-end real-time fatigue detection application using a CNN–LSTM sequential classifier trained on SUST video datasets for temporal driver alertness monitoring.
- Developed a continuous OpenCV inference pipeline with sliding frame buffering, temporal probability scoring, and controlled alarm cooldown for production-like low-latency alert generation.
- Improved system reliability through hybrid deep learning + Haar-cascade eye closure fallback validation, reducing false positives during long-duration monitoring.

SKILLS:

- **Languages:** C#, Java, Python, TypeScript, JavaScript
- **Backend:** .NET, ASP.NET Core, EF Core, Node.js, Express, FastAPI, Spring Boot, REST APIs
- **Cloud & DevOps:** Microsoft Azure, Azure Functions, Bicep, Azure Service Bus, Docker, GitHub Actions
- **Databases:** SQL Server, PostgreSQL, MySQL, MongoDB
- **Frontend:** Angular, React, Next.js, Tailwind CSS
- **Testing & Observability:** xUnit, Testcontainers, OpenTelemetry, Application Insights
- **AI/ML:** Gemini API, LLM Tool Use, MCP, TensorFlow, PyTorch, OpenCV
